Current Apps in Flight

NEW APP VARIETIES SOON TO BE ADDED

The **Cerner Open Developer Experience (code)** team continues to see tremendous growth in the depth and variety of SMART on FHIR apps approaching the Cerner ecosystem. The Open Platform team is quite busy with the validation process to further add 3rd party applications to the App Gallery to fill out client needs.

We currently have 20+ developers in the various stages of the **code** validation program (functional, operational, user experience and security). We believe in the power of an interoperable platform and the Open Platforms group does an excellent job curating apps to provide confidence and repeatability for our clients when installing a validated app.

Please review the next few pages that highlight some of our most exciting apps that will be coming soon to the App Gallery. As always, you can find the latest in documentation, app information and contact info at our website, code.cerner.com. (*apps listed herein have no guarantee or promised timeline to complete the **code** validation program).

Coverage

We're the only solution that addresses every zip code in the US. We touch every county with no preference between large cities, small towns, and rural areas. [Try it yourself!](#)

Aunt Bertha

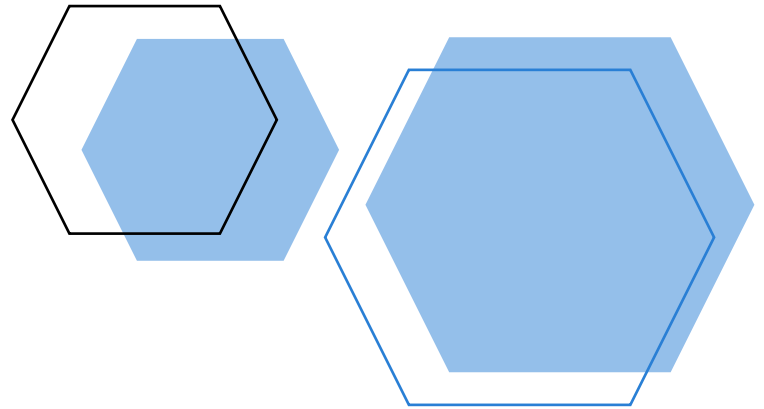

SOCIAL DETERMINANTS OF HEALTH – PROGRAM REFERRALS

Aunt Bertha is the largest closed loop referral network for social services in the United States. Since 2010, we've been connecting people in need and the programs that serve them, with dignity and ease.

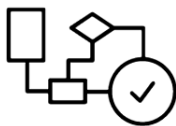

When someone takes the step to seek help, that's a transformative moment. Our responsibility is to build on that momentum with a search experience that's simple, fast, and relevant.

Our filtering criteria refines results down to the level of specificity needed, resulting in only the most relevant resources for a Seeker's unique needs.

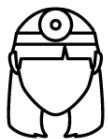

Our user base of 1.5 million Seekers nationwide grows at an unprecedented rate. This growth increases both the number and quality of our program listings via crowdsourcing and user feedback, which in turn draws more users to the Platform.

HealthTensor reviews every data point on every patient in real time

Clinically-validated algorithms diagnose and document common acute and chronic conditions

Physicians review evidence-backed notes and sign off

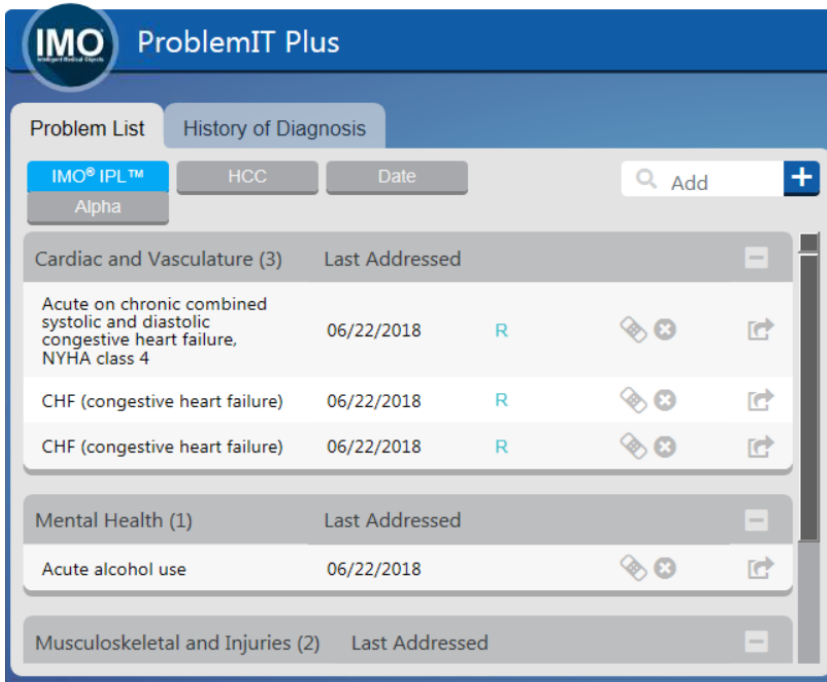

HealthTensor

AUTOMATING PHYSICIAN DOCUMENTATION

PHYSICIAN TIME SAVING AND SATISFACTION

TRUSTED PARTNER FOR DOCUMENTATION

- Enhance physicians' ability to provide high-quality patient care
- Spend less time in the EHR and reduce burnout
- Evidence-backed notes at the front-line means fewer coding queries from the back-office
- Reduce risk of missing important data
- Less time in the EHR means more time with patients
- Automatic and complete data review means fewer missed diagnoses
- HealthTensor constantly learns from physician usage and patient outcomes ensure better care

Why Problem IT Plus?

- More streamlined and intuitive workflows
- New tools for Problem List management
- Improved HCC tracking
- Integration options within your EHR

How can Problem IT Plus help my organization?

- Optimize reimbursement by tracking HCCs in both Assessment History and the Problem List
- Ensure optimal specificity of ICD-10 coding
- Intelligently prompt providers with unaddressed HCCs
- Improve provider efficiency and satisfaction with IPL's categorized view of the Problem List
- Future-proof your coding by capturing and leveraging the IMO Lexical ID
- Simplify maintenance of your providers' favorites lists

Parachute Health

A BETTER WAY TO ORDER MEDICAL EQUIPMENT

Parachute Health offers an ePrescribing solution for DME and Healthcare supplies. Their value proposition includes eliminating unnecessary data entry, confusing medical justification requirements and wasteful phone tag by offering simple step by step medical documentation with digital doctor signature capture, real-time order status updates, electronic messaging between clinicians and vendors and data reporting on ordering patterns, fulfillment performance trends and utilization metrics.
