Current Apps in Flight

NEW APP VARIETIES SOON TO BE ADDED

The **Cerner Open Developer Experience (code)** team continues to see tremendous growth in the depth and variety of SMART on FHIR apps approaching the Cerner ecosystem. The Open Platform team is quite busy with the validation process to further add 3rd party applications to the App Gallery to fill out client needs.

We currently have 20+ developers in the various stages of the **code** validation program (functional, operational, user experience and security). We believe in the power of an interoperable platform and the Open Platforms group does an excellent job curating apps to provide confidence and repeatability for our clients when installing a validated app.

Please review the next few pages that highlight some of our most exciting apps that will be coming soon to the App Gallery. As always, you can find the latest in documentation, app information and contact info at our website, code.cerner.com. (*apps listed herein have no guarantee or promised timeline to complete the **code** validation program).

MobileSmith
HEALTH

Mobile Smith

SUPPORTS PRE- AND POST-PROCEDURAL ADHERENCE ACROSS EPISODES OF CARE.

MobileSmith Health's Peri™ is an intuitive and patient-friendly way to gain visibility and efficiency throughout pre- and post-procedural adherence that reduces cancellations and complications across episodes of care

Through seamless EMR integration and adherence tracking dashboards, Peri can save facilities as much as \$300 per procedure by reducing complications, cancellations and 30-day readmissions.

Peri Dashboard allows clinicians to view all active patient pathways, and to be automatically alerted to adherence violations in real time. Peri Mobile is the new patient-facing mobile solution that replaces dense PDF booklets with a comprehensive, easy-to-use app. Patients can now easily view critical pre-op and post-op instructions and complete them as event checklists

ImageMover

IMAGING WORKFLOW, SIMPLIFIED

ImageMover offers a patient centric platform to connect and optimize health systems existing imaging systems. It leverages health systems existing PACS and EHR solutions to connect disparaging imaging workflows.

Offers outpatient workflow, where a primary care provider can securely capture a picture of a patient's rash and instant integration into the EHR system. No data is left on the smartphone using the HIPPA-compliant workflow.

ImageMover allows a care team to easily view the most recent imaging done in other clinics for speed of diagnosis and avoidance of duplicate studies.

EBMCalc

EDUCATIONAL MEDICAL REFERENCE

EBMcalc is a unique educational medical reference that brings medical literature to life! EBMcalc references hundreds of medical journal and textbook articles comprising a wide array of medical equations, clinical criteria sets and decision trees. From this literature EBMcalc creates interactive versions of these resources to aid in learning Evidence-Based Medicine.

You can now access EBMcalc equations, criteria sets, decision trees and data converters on your iPhone, iPad, or Android device.
